Introduction

The REGENT regulation by the German Federal Network Agency provides that from 1 January 2020, uniform network charges in the form of postage stamp tariffs will be determined for the GASPOOL market area.

As the MARGIT, BEATE 2.0, and AMELIE regulations, the REGENT regulation that was published on 29 March 2019 is based on provisions from the European regulation for the harmonisation of network charge structures – the Network Code Tariff (NC TAR) – that has applied since 2017.

Court appeal proceedings are pending against the regulations REGENT-GP and REGENT-NCG that were established on 29 March 2019. The network charges published in this price list shall therefore apply provided that the REGENT regulations are not amended or repealed in the proceedings mentioned above. The outcome of the pending proceedings may lead to changes to the tariff structure (possibly at short notice).

The rules contained in this price list and the

- "Terms and Conditions for the Entry and Exit Contract with Nowega GmbH" (TC) and the
- "Additional Terms" (AT)

shall apply, unless otherwise stipulated in this price list.

1 Tariffs on a daily / fractional-year basis

Daily charges are calculated by dividing the annual charge stipulated in Section 11 of this price list by 365, or, as the case may be, 366 in leap years. The transmission charges for a fraction of a year are calculated by multiplying said daily charge with the number of days in the contract term and applying the following multipliers.

In accordance with the Federal Network Agency's Specifications Regarding Tariffs for Entry and Exit Capacities (Festlegung der Bundesnetzagentur hinsichtlich Bepreisung von Ein- und Ausspeisekapazitäten,"BEATE 2.0") dated 29 March 2019 (BK9-18/608), the following multipliers shall apply for all entry and exit points when converting annual service fees to the service fees for capacity products lasting fractions of a year (daily, monthly and quarterly products):

Within-day product (duration of 1 to 24 hours) = 2.0

Daily product (term: 1 to 27 days) = 1.4

Monthly product (term: 28 to 89 days) = 1.25

Quarterly product (term: 90 to 364 days) = 1.1

These multipliers are applied to the specific Nowega price for any bookable capacity. The multipliers are not applicable to internal orders.

For within-day capacity products and capacity excessive nomination at market area interconnection points, the respective applicable daily charge is divided by 24 hours, and the factor for within-day products is applied. Only the booked hours of the respective gas day are invoiced.

2 Tariff for conditional capacity

The BEATE 2.0 regulation mentioned above provides that the charge applied for conditional firm capacity products may not be lower than that applied for interruptible capacity products. A factor of 0.9 is therefore applied to the specific charge. Conditional capacities are marked accordingly in Section 11 of this price list and shown with their reduced price.

3 Tariff for interruptible capacity

Pursuant to the provisions of the BEATE 2.0 regulation mentioned above, a deduction must be applied to the network charge for interruptible capacity products. This deduction must precisely correspond to the conditions for booking firm capacity at the respective network point. The actual interruptions of the last three gas years completed are used as the basis for determining the deduction amount. More specifically, the actually interrupted interruptible capacities are considered in relation to the interruptible capacities marketed in the reference period indicated above. The discount determined by means of this ratio is rounded up to the full percentage value and a security reserve of 10 percentage points is added. Nowega GmbH performs this analysis each year in the course of determining its charges.

For 2019, the general discount applied to all entry and exit points of is 10% on the grid charge, which means that the charges for interruptible capacity amount to 90% of the grid charge that would have been applied if fixed capacity had been booked at the respective network point.

The factor of 0.9 is applied to the specific price stipulated in Section 11 of the price list for entry and exit points and for the entry and exit zones alike for interruptible capacity.

Other charges, such as metering charges, redistribution or biogas levies, and the market area conversion levy, are not discounted.

4 Tariff for reverse-flow capacities

A factor of 0.9 is applied to the specific price for reverse-flow capacities. Reverse-flow capacities are marked with the word "Reverse" in Section 11 of this price list and shown with their reduced price.

5 Biogas & market area conversion charges

Please refer to the provisions of the Cooperation Agreement between Operators of Gas Supply Networks in Germany (Kooperationsvereinbarung zwischen den Betreibern von in Deutschland gelegenen Gasversorgungsnetzen) in accordance with Article 20 Para. 1b) of the applicable version of the German Energy Act (Energiewirtschaftsgesetz, "EnWG") regarding the costs incurred by the feed-in and balancing of biogas. The applicable biogas levy is shown in Section 11 per network point / zone.

Please refer to the provisions of the Cooperation Agreement between Operators of Gas Supply Networks in Germany, in accordance with Article 20 Para. 1b) EnWG, regarding the market area conversion levy. The applicable market area conversion levy is shown in Section 11 per network point / zone.

The multipliers mentioned in Sections 1, 2 and 3 are not applicable to these fees.

6 Billing fees

Since 01 January 2017, the billing fee have been included in Nowega's specific grid fees as shown in Section 11. These fees are no longer shown or billed separately.

7 Rounding rules

Invoice amounts or invoice item amounts are rounded up or down to two decimal digits in accordance with standard commercial practice.

8 Penalties

Contractual penalties for exceeding booked or ordered capacities are charged in accordance with Article 5 AC.

9 Fees at storage

Pursuant to the provisions of the BEATE 2.0 regulation, a discount of 75 % based on the charge determined pursuant to the Gasnetzentgeltverordnung (Gas Grid Charges Ordinance, GasNEV) must be applied to charges for storage capacity. Exceptions from this rule apply for storage facilities that are connected to more than one transmission or distribution system and that can be used as alternatives to a network interconnection point (market area or border interconnection point).

The discount is only granted if the storage facility operator provides evidence that the conditions specified in margin number 87, paragraph 3.4 "specifications for the determination of entry and exit charges for storage facilities" of the BEATE 2.0 regulation are met, and provided that an agreement concerning compliance with the conditions provided for in the BEATE 2.0 regulation is in place between the storage facility operator and Nowega GmbH. In the transmission system by Nowega GmbH this applies for the Empelde storage facility that is connected to the market areas GASPOOL and NCG.

In compliance with the provisions determined in the BEATE 2.0 specifications, the discounted tariff at this storage point is 25% of the specific Nowega price published in Section 11 of this price list. The discount applies solely to the specific Nowega price, and always applies to the capacity product available at the respective entry or exit point and the factors applicable to conditional fixed dynamically allocable (bFZK) capacities. Non-discounted capacities are marked with the term "unrab" in the booking process (bFZK = bFZKunrab, FZK = FZKunrab, uK = uKunrab). The term "unrab" is not suffixed to discounted capacities.

10 Nomination replacement procedure

Nowega offers a nomination replacement procedure according to paragraph 14 General terms and conditions of business Supplementary Provisions (as of 01. June 2019). For this purpose the setup costs in the amount of € 2,000.00 and the monthly costs of € 1,250.00 are charged.
