

# Price list

valid for 2024 (calendar year)

## Table of contents

2/11

### Introduction

1. Tariffs for intra-day / intra-year / over-year transmission
2. Conditional capacity tariff
3. Interruptible capacity tariff
4. Biogas and market conversion levies
5. Charge for metering operation
6. Storage fees
7. Rounding up rules
8. Contractual penalties
9. Nomination replacement procedure
10. Entry and exit fees

## Introduction

The network charges will be determined uniformly as a stamp charge for the nationwide market area Trading Hub Europe ("THE") in accordance with the REGENT 2021 specification by the German Federal Network Agency (BNetzA). As with MARGIT 2024, BEATE 2.0 and AMELIE 2021, the REGENT specification, published on 11.09.2020, is based on the requirements of the European Regulation on the harmonisation of transmission tariff structures, the Network Code Tariff (NC TAR), which has been in effect since 2017.

Court appeal proceedings are pending against the REGENT-GP and REGENT-NCG regulations issued on 29.03.2019. The network charges published in this price sheet therefore apply subject to the proviso that the REGENT specifications are not amended or repealed because of the aforementioned proceedings. The outcome of the ongoing proceedings may lead to a change (maybe at short notice) in the tariff structure.

Nowega reserves the right to adjust the fees shown in Part 10 in accordance with Art. 12 NC TAR.

The regulations in this price sheet apply, as well as the

- "Terms and Conditions for the Entry and Exit Contract of Nowega GmbH" (GTC) and the
  - "Supplementary Provisions" (AT),
- unless otherwise specified in this price list.

## 1. Tariffs for intra-day / intra-year / over-year transmission

The daily fee is calculated by dividing the annual fee mentioned in Section 10 of this price list by 365 days or by 366 days (leap year). The fee for intra-year and over-year transmission is calculated by multiplying the daily fee by the number of days in the contract period, taking the following multiplication factors into account.

In accordance with the of the Federal Network Agency specifications regarding the pricing of entry and exit capacities ("BEATE 2.0") dated 29.03.2019 (BK9-18/608, last updated on 16.10.2020 (BK9-20/608)), the following multiplication factors apply to all entry and exit points when converting annual service fees into fractional service fees for capacity products during the year (intra-day products; daily, monthly and quarterly products)

Intra-day product	(term: 1-24 hours)	= 2.0
Daily product	(term: 1-27 days)	= 1.4
Monthly product	(term: 28-89 days)	= 1.25
Quarterly product	(term: 90-364 days)	= 1.1

The multiplication factors are to be applied to the specific Nowega price for all bookable capacities. The multipliers are not to be used for internal orders.

For intra-day capacity products the respective applicable daily charge is divided by 24 hours, and the factor for intra-day products is applied. Only those hours booked on a respective gas day are invoiced.

## 2. Conditional capacity tariff

The BEATE 2.0 regulation mentioned above provides that the charge applied for conditional firm capacity products may not be lower than that applied for interruptible capacity products. A factor of 0.9 is therefore applied to the specific charge. Points at which conditional capacities are offered are marked accordingly in Section 10 of this price list.

## 3. Interruptible capacity tariff

Pursuant to the requirements of the above-mentioned BEATE 2.0 regulation, a deduction must be applied to the network charge for interruptible capacity. This deduction must correspond precisely to the conditions for booking firm capacity at the respective network point. The actual interruptions in the last three completed gas business years serve as the basis for determining the deduction amount. In concrete terms, the interruptible capacities actually interrupted are considered in relation to the interruptible capacities marketed within the reference period indicated above. The discount calculated on the basis of this ratio is rounded up to the full percentage value in each case and a safety margin of 10 percent in the L-Gas network and 20 % in the H-Gas network is added. This evaluation is carried out annually by Nowega within the framework of its pricing activities.

A 10 % discount in the L-Gas network and 20 % discount in the H-Gas network for interruptions given on the network fee will be applied at all entry and exit points, which thus corresponds to a fee for interruptible capacity of 90 % respectively 80 % of the network fee due for booking firm capacity at the respective network point.

For interruptible capacity the factor of 0.9 respectively 0.8 is used with the specific price stipulated in Section 10 of the price list for entry and exit points and for the entry and exit zones alike.

No discounts are granted where biogas and market area conversion levies are concerned.

## 4. Biogas & market area conversion levies

With regard to the rollover of costs incurred in the context of the input and balancing of biogas, reference is made to the corresponding provisions in the "Cooperation Agreement between the operators of gas supply networks in Germany" pursuant to Section 20 (1) b) of the current version of the German Energy Industry Act (EnWG). The currently valid biogas levy is shown in Section 10 per point/zone.

With regard to the market area conversion levy (MRU levy), reference is made to the relevant provisions in the "Cooperation Agreement between the operators of gas supply networks located in Germany" pursuant to Article 20 (1) b) EnWG. The applicable market conversion levy is shown in Part 10 per point/zone.

The multiplication factors mentioned in Sections 1, 2 and 3 are not applicable to these fees.

**5. Charge for metering operation**

In accordance with Section 15 (7) of the Gas Network Charges Ordinance (GasNEV) in conjunction with Section 7 of BNetzA decision REGENT 2021 a fee for metering operation is charged by Nowega for network connection points which Nowega assumes the relevant market role. A detailed description of the scope of services can be found in the „metering point operator framework agreement" on the website of Nowega GmbH. The fee is determined on the basis of a uniform fee for gas meter multiplied with the number of gas meters assigned to the bookable point. Invoicing is carried out on a daily basis per booking. The multipliers described in Sections 1, 2 and 3 according to BNetzA decision BEATE 2.0 are not applicable to the fee.

**6. Storage fees**

In accordance with the provisions of the BEATE 2.0 regulation, fees for capacities at storage facilities are to be reduced with a discount of 75% as compared to the fee determined according to GasNEV. Exceptions to this rule apply to storage facilities which are connected to more than one transmission or distribution network and can be used as alternatives to a network interconnection point (market area or border connection point). In the market area THE on the transmission network of Nowega no storage facilities will be affected.

**7. Rounding up rules**

Invoice amounts or invoice item amounts are rounded up or down to two decimal digits in accordance with standard commercial practice.

**8. Contractual penalties**

Contractual penalties for exceeding booked or ordered capacities are charged for in accordance with Article 5 AT.

**9. Nomination replacement procedure**

Nowega offers a nomination replacement procedure according to paragraph 14 of the Terms and conditions for the entry and exit contract (Entry-Exit-System) of Nowega GmbH. Here the installation costs of 2,000.00 € and the monthly costs of 1,250.00 € are charged accordingly.

## 10. Entry and exit fees
